

# AI-First Startup Hackathon

Where AI becomes your co-founder. Build a fully functional startup, from zero to launch, with AI driving execution.

## Overview

The AI-First Startup Hackathon is not just another coding event. Participants are challenged to build a fully functional startup using AI for everything:

- Idea generation
- Market research
- UI/UX design
- Coding
- Testing
- Deployment
- Pitch creation

No traditional workflows. No manual-first development. This is Vibe Coding, AI Agents and Agentic AI at its peak, where AI drives execution from zero to launch.

## Objective

Build a real, usable startup product in record time using AI-first workflows. By the end of the hackathon, every team must deliver one of the components of a startup function:

- A working product (web, mobile or agent)
- AI-generated or AI-assisted codebase
- Live deployed application
- Pitch deck created using AI
- Demo video

## What is AI-First Building?

- AI is the primary builder, not an assistant
- Humans guide, validate and refine
- 80%+ of execution must be AI-driven
- Tools like ChatGPT, Claude, Copilot, n8n, AI agent frameworks, OpenClaw and others

## Hackathon Tracks

Participants can choose one of the following startup tracks:

### AI SaaS Startup

Build a SaaS product powered by AI

### AI for Healthcare

Diagnostics, wellness, or patient experience

### AI FinTech

Payments, fraud detection, trading tools

### AI for Education

Learning platforms, skill assessment

### AI in any startup

Climate, productivity, accessibility, or any other idea outside the above tracks

## Rules & Requirements

- Minimum 1 and maximum 6 members per team
- At least 80% of the product must be built using AI tools
- Manual coding should be minimal
- Teams must document how AI was used
- All submissions must be original

## What Makes This Hackathon Unique

- AI replaces traditional development workflows
- Focus on speed, execution and product thinking
- Real startup mindset, not just prototypes
- Build in days what used to take months

## Deliverables

Each team must submit:

- GitHub repository
- Live deployed app
- 3–5 min demo video
- Pitch deck
- AI usage report (tools + prompts)

## Prizes & Rewards

|                       |                                                        |
|-----------------------|--------------------------------------------------------|
| <b>Winner</b>         | \$10,000 (in Sharp tokens) + Incubation Opportunity    |
| <b>Runner-up</b>      | \$5,000 (in Sharp tokens)                              |
| <b>Third Place</b>    | \$2,000 (in Sharp tokens)                              |
| <b>Special Awards</b> | Best AI Usage   Fastest Execution   Most Scalable Idea |

## Bonus: AI Leaderboard

A real-time leaderboard that will:

- Track team progress
- Compare AI usage
- See deployment speed

- Rank against global participants

## Who Should Join?

- Developers
- Founders
- Designers
- Students
- AI enthusiasts

If you want to build startups at AI speed, this is for you.

## Format

|                       |                                |
|-----------------------|--------------------------------|
| <b>Duration</b>       | 48–72 hours                    |
| <b>Mode</b>           | Hybrid (Online + Offline hubs) |
| <b>Final Demo Day</b> | Live judging                   |

## Why This Matters

We are entering a world where:

- Startups will be built in days, not years
- AI-native founders will dominate
- Speed is the biggest competitive advantage

This hackathon prepares you for that future.

**Ready to build your startup with AI?**

Join now and compete with the next generation of AI-native builders.
